Congratulations for taking all the steps necessary to make your child’s dental surgery successful!

Did You Know?
To ensure your child’s mouth has healed from surgery, follow up appointments are available in your home community with an oral health professional.

You’ve come this far! Don’t stop now!

What Can You Do To Prevent Cavities?

- Limit foods and beverages containing sugar (including milk, fruit juices, and carbonated drinks)
- Take your child to an oral health professional every 3 months to keep your tooth enamel strong.
- Keep your own mouth clean and healthy to prevent passing oral bacteria to your child.
- Choose water.

Fun Facts!

- Dental Disease is 100% preventable.
- Putting your baby to bed with a bottle is the same as your child having a lollipop in bed every night.
- Children should have their first dental visit by age one.
- Toothbrushing with fluoride toothpaste can reduce dental decay by up to 56%.
